Creativity

CONTROLLING OPERATING COSTS IS CRITICAL TO PROFITABILITY.

SKU proliferation has dramatically increased the complexity and operating costs for distributors. We will show you how to make changes in your warehouse and delivery operations to significantly improve productivity and lower costs by 5-10 cents per case.

Many distributors average only 125-175 cases per hour in their picking operations. There are several methods we can use to improve productivity to over 300 cases per hour.

Most of these improvements will pay for themselves in less than one year. Other benefits that can be realized include increased pick accuracy, improved customer service at retail and lower driver turnover.

LOOK AT DELIVERY FOR MAJOR COST SAVINGS.

One of the major delivery changes that can reduce delivery time by 30% or more is a cart delivery system. This and other topics such as daily delivery variability and a cases per stop analysis can provide key information to significantly reduce delivery costs.

With delivery costs @ \$40/hour or more, maximizing cases/hour delivered is critical to maintaining profitability.

Advance Ship Notices (ASN's) & RFID are also a pre-requisite for efficient delivery in the future.

25-50 Cases per Cart

Cart delivery check-in can be accomplished in less than 3 minutes without blocking aisles throughout the store.

TESTIMONIAL

Thank you for your outstanding work with the warehouse design and layout for Atlas. Over the years, I have had occasion to work with a few warehouse designers, unfortunately all of which did not add nearly the value you provided. I must say that the time, work, effort and plan you put forward is and will provide tremendous value.

*Joe Salois, President
Atlas Distributing*

“We are committed to reducing your costs.”
